

Epilepsy Association of Calgary's Response to COVID-19

The safety and well-being of staff, volunteers, our community, and people affected by epilepsy is at the forefront of our decision making. We continue monitoring the recommendations of Alberta Health Services (AHS), the World Health Organization (WHO), and Federal, Provincial, and Municipal governments towards taking appropriate precautions regarding our day-to-day work, planned public gatherings, and places where transmission may occur.

As the situation evolves, the Epilepsy Association of Calgary (EAC) will follow instructions issued by public health authorities while continuing to maintain our support services to those who rely on us for assistance – all while ensuring we do not contribute to the further community transmission of COVID-19.

Accordingly, all in meetings including support groups will be transitioned to on-line format. These meetings are also accessible by phone. To register, please call (403) 230-2764 x 104 to speak to EAC's support coordinator or to leave a message. You may also call this number to book an appointment for one on one support and information counselling services which will also be delivered by phone or online.

The following resources are recommended by public health and government officials as a means of receiving the latest updates:

Alberta Health Services: <https://www.alberta.ca/coronavirus-info-for-albertans.aspx#toc-2>

Government of Canada: <https://www.canada.ca/en/public-health/services/diseases/2019-novel-coronavirus-infection.html>

If you are experiencing symptoms such as cough, fever, fatigue, shortness of breath – self quarantine for the recommended period of 14 days and call health link (811) for instructions.

On behalf of those who's lives are affected by epilepsy, thank you to all of our supporters for your generosity.

The following page provides some information and resources concerning Epilepsy and COVID-19.

Epilepsy & COVID-19

It is understandable to feel anxious or worried about COVID-19. According to Alberta Health Services, the public threat from the coronavirus remains low. According to the Epilepsy Foundation of America: “preliminary information from countries where outbreaks have occurred suggests the risk of worsening seizures with COVID-19 appears to be low for most people with epilepsy”.

Emergency preparedness is part of life for all of us and being prepared is important. Whether it is a natural disaster, extreme weather conditions, or medical emergencies. Here are some epilepsy specific emergency preparedness strategies:

- Talk to your pharmacist first about creating an emergency supply of prescription medicines to have at home. Pharmacists in Calgary recommend having a 3-month supply of medication(s) if your insurance will cover 3 months at a time. Otherwise, be sure you always have a minimum of two-weeks supply (14 days).
- If you are going to need to refill or fill a new prescription in a few weeks, get it early so you don't run out.
- If you have been prescribed a rescue medication to take if you have a change in seizures, talk to your pharmacist about an emergency supply of this medication to have at home too.
- If you worried about medication shortage, call your pharmacy to find out about the supply and if there are unable to help you in accessing a suppl your medication(s) call your treating health care practitioner to discuss options (i.e. may need to substitute another medication for a short period).
- Keep your seizure response plan up to date and keep it in a place with a list of your medications, important documents, and a two-week supply of medication in a watertight bag or container.
- Keep your phone and any electronic devices charged you might need for medication reminders and contact information for family, health care providers, and emergency response.
- Continue to use your medication reminders so you take your medication(s) as prescribed and track your seizures.
- Talk about any questions or worries you may have with family, friends or by contacting the Epilepsy Association of Calgary. Added stress can affect seizures and your emotional well-being.
