

Guided by a passion for data & technology, Harsh works with organizations to understand the ‘so-what’ behind their data and convert their data assets into informed decisions. As the Healthcare lead at SAS Institute Canada, Harsh works with researchers, policy analysts, and epidemiologists across public sector and research organizations to help them drive policies and improve outcomes.

Having witnessed his spouse manage her epilepsy he understands its impact to an individual’s ability to live their full lives, and how misconceptions and misinformation about epilepsy continue to persist in our society. Harsh’s passion for supporting the Epilepsy Association of Calgary was driven by an appreciation for the effort of all people with epilepsy and their caregivers. As the Data & Information management committee chair, he hopes to use his skills and experience to further EAC’s mission to support independence, quality of life and community participation for those with and affected by epilepsy.
